

## **Bacstel-iP system for iSeries Release 1.5.2 update installation**

This is a major update to the Grange Bacstel-iP system for iSeries.

It is required to meet the new communications requirements of the Bacstel-iP service and also to support current versions of Windows 7, 8.1 and 10.

The installation instructions are contained in the zip files along with all the new release objects.

### **Important Notes:**

Prior to installing the new version you must contact your Bank (BACS liaison) to do the following:

Advise the Bank that you are installing a new version of the Bacstel system with a new package ID. Give them the following information –

Supplier        Grange IT Limited  
Package        Grange Bacstel-IP for IBM iSeries  
Package ID    SFP9790

Request that this package is in addition to the existing package.

In addition you should check the version of the Gemalto eSigner software on the PC's. Gemalto eSigner **must** be at release 6.3 or later. You are strongly advised to ask your Bank for the latest release of Gemalto eSigner in any case.

To check the Gemalto version, go to [www.grangesystems.com](http://www.grangesystems.com) then to the Support page, and download the document '*Determine the version of Gemalto eSigner software on PC*'.

Please download the zip files into a temporary location and review the installation instructions. You should read the Installation notes first before proceeding.

Before installation please check the release level of your iSeries Bacstel-IP system. This is displayed at the bottom of the Bacstel User menu.

If you are at release 1.5 please contact Grange or your support Agent first before proceeding.

You are **strongly advised** to take full backups of all the Checker and Bacstel objects on the PC, and Bacstel libraries on the iSeries (usually GRBACSIP1) before updating.
